

Corsair One i500 PC Front light strip Update SOP

Required Components

- System can access the internet
- Front light strip is connected
- Firmware for Corsair One i500 light strip
 - You can download the Firmware file from Corsair Website

Caution

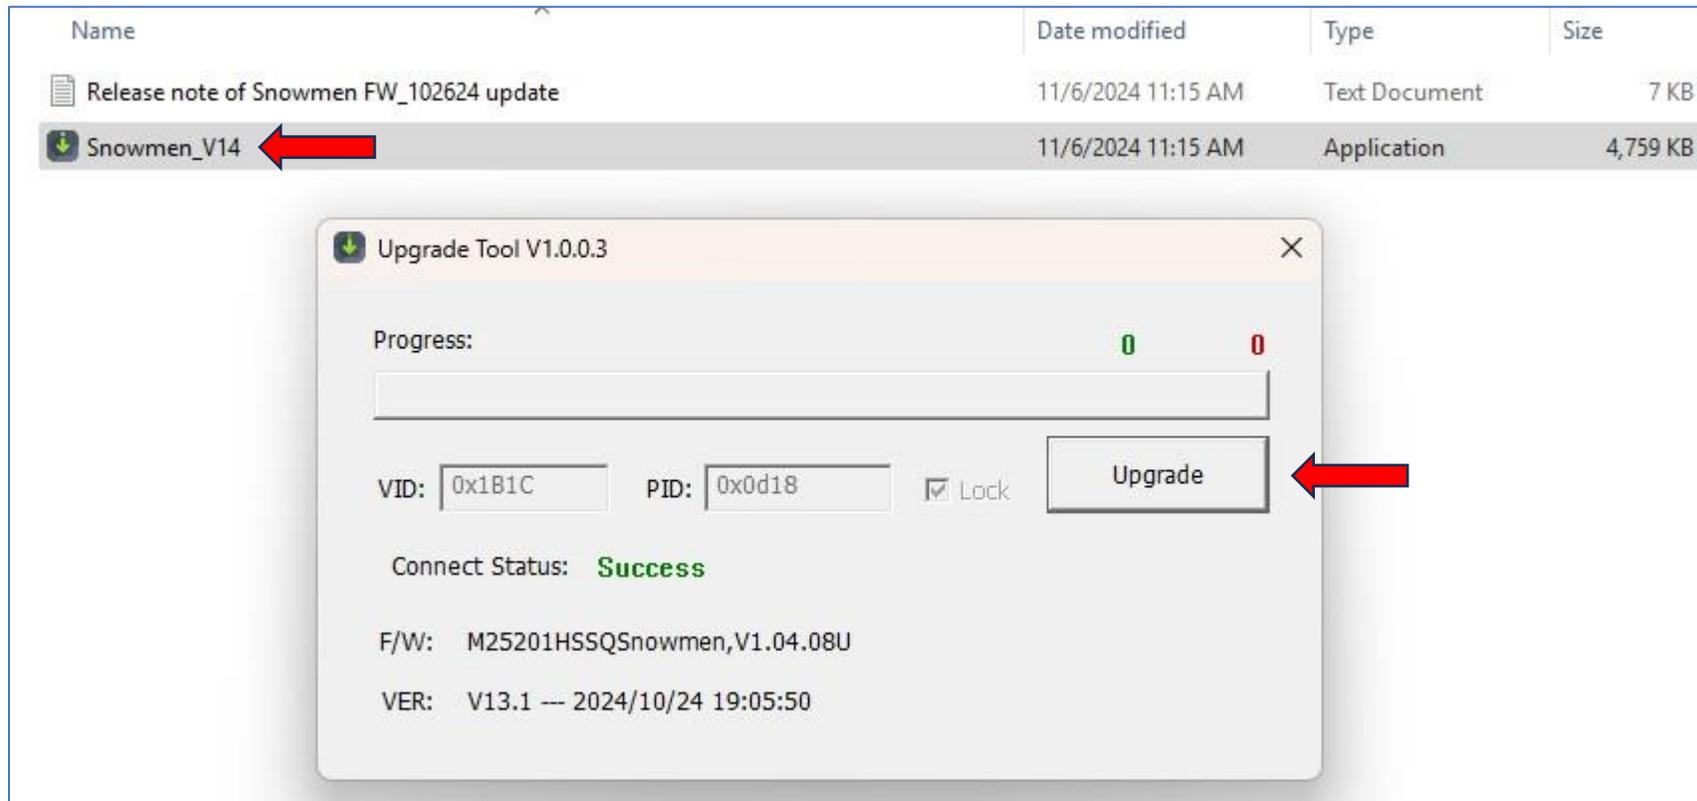

- Please extract the Firmware file that you have downloaded and store it on your Corsair One i500 PC
- Please **DO NOT** shutdown or restart system until Firmware update process is completed

Step 1. Start the update process

Double-click the Firmware update application, an Upgrade Tool window will pop up.

Check the Connect Status is "Success".

Click on the "Upgrade" button to start the Firmware update process.

Step 2. Firmware update in progress

Firmware update in progress, please **DO NOT** shut down the system or turn off the Upgrade Tool.

The screenshot displays a file explorer window with the following table:

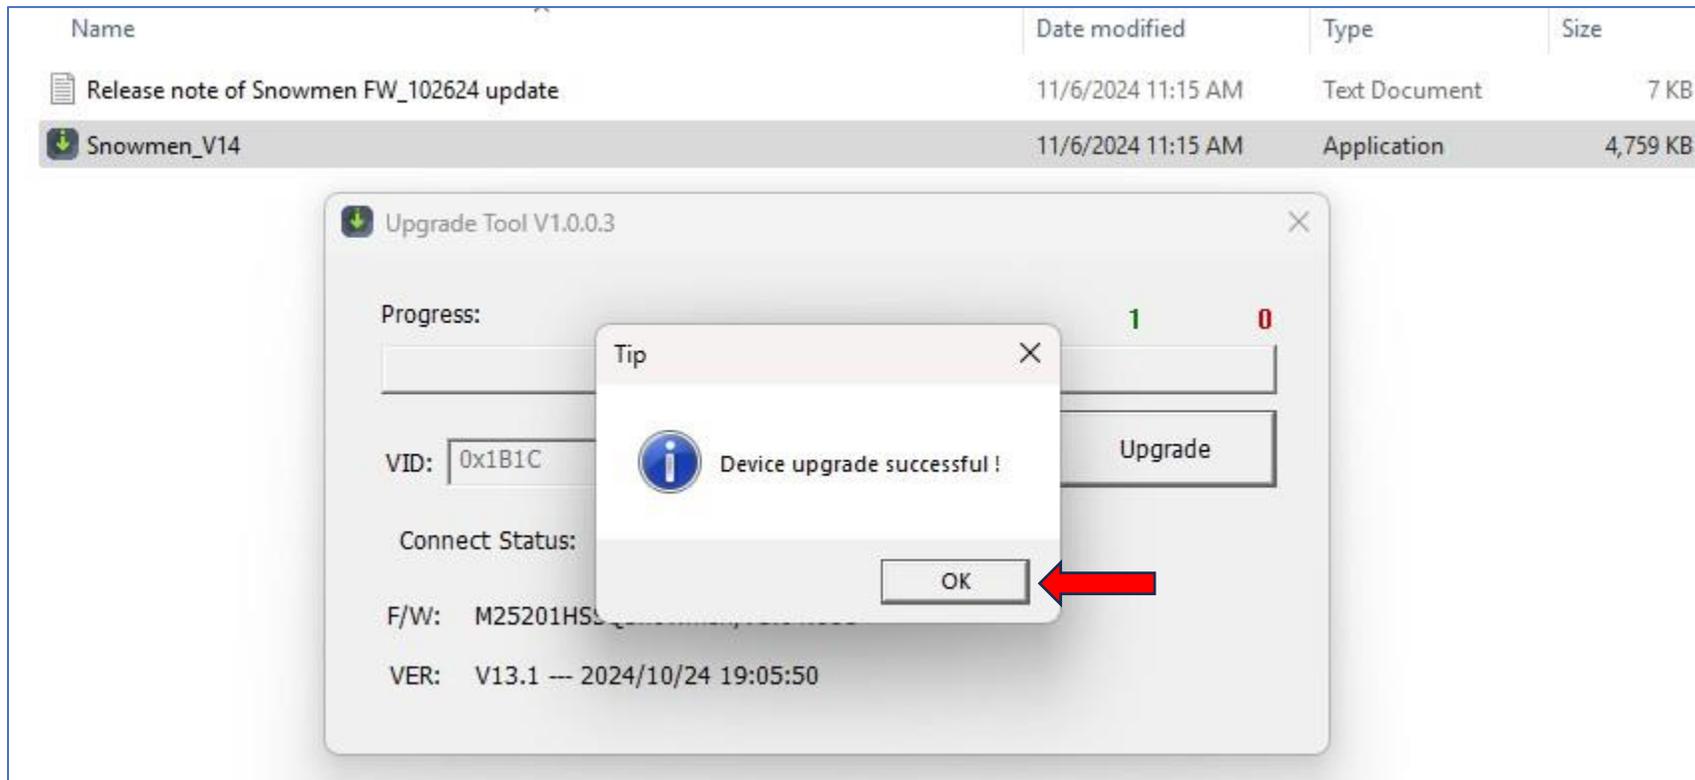

Name	Date modified	Type	Size
Release note of Snowmen FW_102624 update	11/6/2024 11:15 AM	Text Document	7 KB
Snowmen_V14	11/6/2024 11:15 AM	Application	4,759 KB

Overlaid on the file explorer is the 'Upgrade Tool V1.0.0.3' dialog box. It features a progress bar labeled 'Progress:' which is currently at 0%. Below the progress bar, there are input fields for 'VID: 0x1B1C' and 'PID: 0x0d18', a checked 'Lock' checkbox, and an 'Upgrade' button. The 'Connect Status' is shown as 'Success' in green text. At the bottom, the following information is displayed:

F/W: 0000-000-000-000
VER: 0000 -- 0000-00-00 00:00:00

Step 3. Firmware update complete

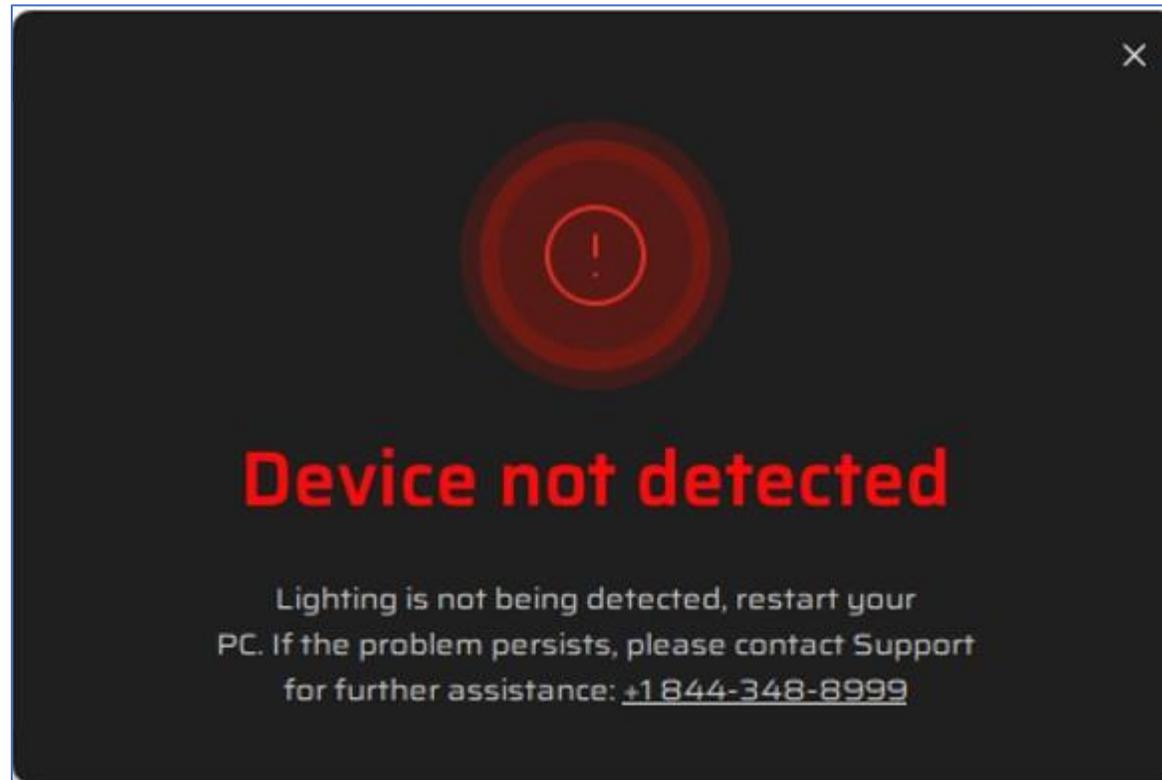

After completing the Firmware update process, a notification window will appear and states “Device upgrade successful!”. Click on “OK” to finish the process.

Note

After the Firmware update process is completed, the system will redetect the light strip, and a warning message will appear for a short time.

When the light strip has been detected, the warning message will disappear.
